

FLOOR PROFILE SYSTEMS AND FLOOR PROFILES

for laminate, parquet, LVT,
resilient and textile floor covering

“ To ensure that my customers can appreciate my work for many years to come, I only ever use floor profiles from Proline. Their ease of use and supreme quality have impressed me and my customers for many years. ”

For a secure bond

Proline floor profile systems and floor profiles

The beauty of safety

Floor profiles give the final touch to high quality floors and add real style to living spaces. Moreover, they provide a secure hold for floor covering. This increases the durability and visual quality of floors for many years. Choose quality from Proline and the right choice is made in every case.

Mastering transitions with ease

Different floor covering often have different heights. But, depending on the material, they also need room to expand and contract. With high quality floor profiles from Proline, child's play is made of this double challenge. Differences in height can be balanced out with millimetre accuracy. Connections remain strong for a long time without restricting the freedom of movement that materials need.

Reliability guaranteed

Independent tests repeatedly confirm the outstanding quality of Proline floor profiles. To achieve this quality, we work very closely with our customers. In this way, we have built up a unique pool of knowledge and expertise over the years that tradesmen benefit from in their daily work: Our products are easy to work with and have guaranteed longevity – such as the PROVARIO product for which we offer a 10 year warranty on functionality.

Binding quality

"German Quality" is for us more than just a vision. In our day-to-day activities we manufacture and develop most of our products in Germany. This guarantees the highest level of quality and greater material technology innovation. The combination of the two ensures that our profiles are always securely connected.

Top products for specialists

Outstanding Proline knowledge and expertise down to the finest detail make Proline your reliable partner. You, too, can benefit from our interlinked system solutions: From excellent underlay webs through to elegant finishes with high quality Proline floor profiles. We supply you with the best materials. Of that you can be sure. As an all-round supplier, we stand by our word. If we haven't got it, you do not need it.

Of that you can be sure

Customer requirements vary widely, even when it comes to floor profiles. As a result, we offer you the right solution for every budget and every application. From outstanding premium quality and special-purpose profiles to robust industrial standard quality, Proline floor profiles leave nothing to be desired.

As individual as your customers

Proline also set standards when it comes to design. It goes without saying that our floor profiles can be adapted to match the colour and trim of floor covering. Our selection of anodised colours and wooden decorative trim is held in high regard by Proline customers. And many professionals go one step further: Our stainable and paintable products from the Proline floor profile portfolio.

The right profile

Bridging the gap between aesthetic and technology

Determining which floor profile is right for each particular scenario is not always as easy as it sounds. The choice of various floor covering depends on a wide variety of requirements: Transitions have to be mastered, floating coverings fixed but, at the same time, remain movable. One thing among all of these requirements is for sure: With the extraordinary floor profiles from Proline you can complete any task reliably, quickly and safely.

The look is decisive

Interior design should be pleasing to the eye, so looks are a decisive factor when it comes to high quality floor covering. That is why we offer our floor profiles in so many high class finishes. Proline gleams with optical adaptability to provide the perfect finish for practically any situation. You'll see the sparkle in your customers' eyes when they see the results.

Nothing is impossible

Thanks to innovative technology, incompatible floor covering has become a thing of the past. Our height-adjustable and variable angle PROVARIO transition profiles bridge even significant height differences and extremely wide transitions. The unique Proline swivel joint technology provides you with greater scope for adaptation and much more flexibility.

For bridging gaps, finishing ends and edges or for stairs

Our profiles can be adapted to suit different needs, thereby enabling you to achieve perfect craftsmanship down to the finest detail. For bridging gaps, finishing ends, for edging and for stairs, the Proline product line offers you supreme quality and innovative technology. They even match budget requirements on site.

New buildings

The greatest scope in the selection of suitable floor profiles can be found in new builds. Profiles can be planned and prepared even before the floor covering is fitted. For builders, this equates to full creative freedom when it comes to interior design and technical solutions thanks to the wide choice of high quality floor profiles.

When old meets new

Renovations and refurbishments must also fulfil special requirements in terms of floor profile installation. If old floor covering are combined with new ones or transitions between existing floor covering have to be renovated, retrofit floor profiles are called for. Proline floor profiles are ideally suited for these purposes.

When it comes down to it

Profiles that can be adjusted in height and tilt are especially suitable for bridging differences in height. The key here is millimetre accuracy. But above all it is important for the cover profile to be attached securely to the support profile. When it comes down to it, this is precisely where our screw-fixed PROVARIO floor profile systems, with swivel joint technology, come into their own.

The forgotten profile

Sometimes, things do not always happen in the right order – the floor covering are already laid but no thought was given to the profiles. Planning errors like these can be quickly ironed out by selecting the right profile retroactively. PROCOVERfix, the fully fledged design solution for trouble-free retroactive installation, is also very good for renovations.

Comfortable and safe

Screw-on floor profiles are strong and can be used almost universally. What makes them stand out are the high quality materials, supreme craftsmanship and perfection right down to the finest detail. One example of this is the 4-way screw guide on all Proline profiles fitted with swivel joint technology. It ensures that screws are correctly seated in the cover profile and the screw head is countersunk for a clean finish.

One click and it is done

Our clip-in floor profiles are just as practical as they are easy to fit. The plastic joints integrated into the clip-in profiles compensate for movements in floating floors without stressing the joint. This ensures lasting durability.

Protruding edges that make you trip are a thing of the past

Today, all new public buildings are designed for wheelchair access as a matter of course. Protruding edges, however, are still a problem in hospitals, businesses, shops, shopping centres and homes for the elderly. Actually, thanks to profiles from Proline, they are no longer a problem. Because seamless transitions in design floors come naturally for PRONIVO K3.

You have the choice, we have the solution

The diversity of our floor profiles

The highest quality, a maximum in performance and a perfect customization to our customer's preferences and requirements are the most important factors in the development and selection of our products. We offer you the perfect profile for every budget, purpose and demand.

FLOOR PROFILE SYSTEMS WITH SWIVEL JOINT TECHNOLOGY

Top-notch quality to meet the highest standards

Maximum flexibility, the highest load capacity and selected décor are available in the area of our three-part floor profile systems. You can be confident that These profiles, which are adjustable to any height and gradient, will give you a genuine market advantage in terms of technology, as well as in décor and aesthetics.

FLOOR AND STEP PROFILE SYSTEMS

High-quality profiles for price-conscious applications

Whether it is a floating installation with click system or permanently bonded, our two-part floor profile systems ensure that you have perfect laminate and parquet edge protection and transitions that do not cause tripping.

The choice is yours:

- **PROVARIO Universal und Universal XL** – with screw-down cover profiles and swivel joint technology * for maximum adjustability
- **PROVARIOclip Universal** – with clip-on cover profiles

The choice is yours:

- **PROCOVER Designfloor und Designfloor S** – for vinyl and design floor covering with two different cover profile widths
- **PROCOVER Universal** – two-part, screw-down profiles for simple installation and price-conscious customers
- **PROCOVERclip Universal** – clip-in profiles for transitions without a step, adaptations and terminations
- **PROSTEP Universal und PROSTEP** – screw-down step profile systems

* applies to transition profiles and compensator profiles

FLOOR AND STEP PROFILES

Dependable quality for budget-conscious customers

Renovating floors or stairs places special requirements on floor profiles. We offer a wide selection of high-quality and sophisticated profiles for all purposes and installation types.

The choice is yours:

- **PROCOVERfix Universal** – ideal for retroactive installation, for example when refurbishing old buildings
- **PROSTEP** – Step profiles for various coverings and applications
- **PROFACE** – Profiles for edging and end finishes, screw-on or self-adhesive for hard, textile and elastic coverings
- **PROTRANS** – Transition profiles for hard, textile and elastic coverings
- **PRONIVO K3** – Transition and compensator profiles especially for design floor coverings
- **PROFINISH** – Compensator profiles for smoothing out differences in height

Bridging the gap with perfection

With profiles from Proline, you can make reliable and millimetre-precise connections between different coverings. They are suitable for:

Transitions

With our transition profiles, you can allow enough space for coverings to expand and contract yet still achieve a flush finish. Particularly wide joints up to 45 mm can be bridged with the high quality PROVARIO Universal XL profiles. Thanks to our swivel joint technology, they still have a degree of flexibility to compensate for height differences.

Compensations

Large differences in height from dissimilar floor covering can be compensated for in no time. The PROVARIO product line provides you with the unique Proline swivel joint technology to do this (Patent EP 1223268 and US 6,647,680 B2).

Endings

With ending profiles from Proline, you can achieve aesthetically pleasing end finishes with a perfect fit. They are flexible in both width and height to meet every demand. Edge profiles that can be push-fitted into hard floor covering are available from the PROFACE product line.

Stairs

For non-slip and durable stair edges with a high quality appearance, we recommend PROSTEP profiles. Profiles are available with or without insert in the tread and can be adapted flexibly in height to the stair structure. Naturally, we use only the best materials in areas of the stairs that are exposed to the greatest wear.

Floor profile systems with swivel joint technology

PROVARIO Universal and Universal XL

By offering the three-part premium profiles from the **PROVARIO Universal** range, we provide you with top-notch floor profiles to bridge any transition. The range features transition and compensator profiles, both of which are adjustable to any height. The **PROVARIO Universal** range has also been expanded with ending profiles that are adjustable to any height. The series adapts itself seamlessly to any floor covering and gives the final aesthetic touch to the floors.

Strength and movement

PROVARIO floor profiles combine what appears to be incompatible: High stability and the ability to make allowance for movement in the floor covering. The trick behind this is our patented swivel joint system (Patents EP 1223268 and US 6,647,680 B2). We are particularly proud of this. Because it absorbs floor covering movements without the need for screws and joints. Furthermore, it is easy to fit and produces seamless transitions virtually automatically.

PATENTED

Fits as well as ever

PROVARIO Universal floor profiles provide you with maximum flexibility and long-lasting durability. Depending on the application we offer you solutions for many requirements, including the following:

- **Extra large height differences**
- **Extra wide transitions**
- **Greater stability**
- **High flexibility**

* Applies to PROVARIO Floor profiles for professional installation.

Screw-down floor profile systems

Lengths: 90 cm, 100 cm and 270 cm

Height adjustment: 2–25 mm (depending on the product)

Angle adjustment: 0–28 mm (depending on the product)

Functions and adjustment ranges: Pages 12–13

Areas of application

Designed for parquet, laminate, wooden planks*. Wherever a strong hold and perfect fit are needed. Available as transition profiles, compensator profiles and ending profiles.

Transition Compensation Ending

A touch of beauty for any floor

To ensure that Proline floor profile systems also shine in their appearance, they are available in high quality anodised colours which last for years.

Stainless steel

Easy to place

With PROVARIO you can create the perfect transition in five easy steps:

1 Cut the base and cover profiles to the required length on the same side. Screw or bond the base profile to the floor. If you have underfloor heating, use a suitable adhesive.

2 Lay the floor covering on the joint – depending on the shrinkage and expansion properties of the covering type.

3 Insert the tab of the cover profile into the joint of the base profile.

4 Now screw the cover profile of the transition ...

5 ... or compensator profile fixed in the joint.

Floor profile systems with swivel joint technology

PROVARIOclip Universal

Our PROVARIOclip Universal clip-in floor profile systems are designed for floating floors. These profiles are very special due to their lasting durability and their capacity to absorb movements of the coverings. They are also available in over 20 different decorative finishes – to ensure that they look perfect right into the finest detail.

High quality materials

Aluminium is lightweight, resistant and long-lasting. That is why we selected aluminium as the best material for our clip-in floor profiles. In combination with our swivel joint technology that was engineered to match this system, an extraordinary amount of adjustability is possible. As swivel joints require no screws, they are quick to install and very pleasing to the eye in living spaces.

Right sit, right fit and space to move

Two guiding factors that we base the development of our products on are their suitability for the application and orientation around customer requirements. We have perfectly adapted our PROVARIOclip Universal clip-in floor profile systems for use in floating floor designs. They facilitate maximum freedom for the floor to move yet still provide a secure fit.

- **Ideal for floating floors**
- **For covering expansion joints**
- **Facilitate expansion and contraction in floor covering without imparting pressure on screws and the structure**

* Applies to PROVARIOclip Universal when installed professionally.

Clip-in floor profiles

Lengths: 90 cm, 100 cm and 270 cm

Height adjustment: 2–18 mm (depending on the product)

Angle adjustment: 0–21 mm (depending on the product)

Functions and adjustment ranges: Pages 12–13

Areas of application

The floor profile systems are designed specifically for floating floors. They allow movement in the floor covering yet still ensure a perfect fit and aesthetic appearance. They are available for transition profiles, adaptation profiles and end finish profiles with or without swivel joint technology.

Amazingly quick and easy

Using **PROVARIOclip Universal**, you can achieve the perfect bridge gap quickly and easily:

1 Cut the base and cover profiles to the required length on the same side. Screw or bond the base profile to the floor. If you have underfloor heating, use a suitable adhesive.

2 Lay the floor covering on the joint – depending on the shrinkage and expansion properties of the floor type.

3 To spread the plastic joint mounted in the base profile slightly, insert the tab of the cover profile into the joint and strike it with a clenched fist until the cover profile is in full contact with the two floor covering.

4 If necessary, a little help can be provided with some careful strikes of the hammer on a tapping block.

5 If the profile is installed professionally, we award a ten year guarantee on functionality.

Floor profile systems with patented swivel joint technology*

Product		Application	Function	Height adjustment	Ideal for
PROVARIO Universal		Transition profile	Swivel joint technology for maximum flexibility	7–18 mm	Laminate and parquet
PROVARIO Universal		Compensator profile	Swivel joint technology for maximum flexibility	2–18 mm	Laminate and parquet
PROVARIO Universal		Ending profile	Adjustable to any height	7–18 mm	Laminate and parquet
PROVARIO Universal		Ending profile	With extra wide base profile and adjustability to any height	7–18 mm	Laminate and parquet
PROVARIO Universal XL		Transition profile	Swivel joint technology for maximum flexibility	12–25 mm	Parquet and wooden planks
PROVARIO Universal XL		Compensator profile	Swivel joint technology for maximum flexibility	2–25 mm	Parquet and wooden planks

Floor profile system

PROCOVER Universal

By offering PROCOVER Universal, Proline gives you a perfectly coordinated, screw-down floor profile system for laminate and parquet. The height-adjustable profile system creates a harmonious floor covering and provides you with transition, finish and height compensation. Incompatible floor coverings are a thing of the past thanks to PROCOVER Universal.

Secure, stable, durable

The PROCOVER Universal floor profile system consists of a finish, transition and adaptation profile. High-quality in design and one-of-a-kind in flexibility, it ensures secure and stable floor covering. In doing so, the coverings get enough working and breathing room. Thus, the profile system guarantees high floor quality in the long term – aesthetically and functionally.

Quality that you can feel

Whether installed floating with a click system or bonded, the PROCOVER Universal profile system guarantees perfect edge protection and transitions without a trip hazard – for those who want to enjoy their high-quality floors barefoot.

- Ideal for laminate and parquet
- Surface-flush screw head sinking
- Height adjustment elements allow the height adjustment range to be expanded to 18 mm

Quick and easy screw-down floor profile systems

Lengths: 90 cm, 100 cm and 270 cm

Height adjustment: 0–15 mm (depending on the product)

with height adjustment elements (accessories): Up to 18 mm

Functions and adjustment ranges: Page 20

Areas of application

Particularly suitable for laminate and parquet as a transition, adaptation and ending profile in high-quality aluminium.

Transition **Compensation** **Endings**

Amazingly quick and easy

With PROCOVER Universal you can bridge a perfect gap quickly and easily:

1 Cut the base and cover profiles to the required length on the same side. Screw or bond the base profile to the floor. If you have under-floor heating, use a suitable adhesive.

2 Lay the floor covering on the joint – depending on the shrinkage and expansion properties of the floor type. If an additional increase is needed, the practical adjustment parts are easy to insert.

3 Place the lip of the cover profile over the base profile.

4 Now screw the cover profile of the transition of the ending profile in the base profile.

Floor profile system

PROCOVERclip Universal

The most important criteria during the development and selection of our products are the highest quality, maximum performance and also perfect adaptation to the desires of the customer and the needs of the fitters. With PROCOVERclip Universal, Proline offers a perfectly adapted, clip-in floor profile system for parquet and laminate floor covering.

Perfection in function and design

PROVARIOclip Universal creates harmonious transitions, connects different floor covering securely and completes floor covering with precision. In addition to its perfect fit, nothing is left to be desired in an aesthetic sense. The anodised aluminium cover profile is available both in the cool colours silver and stainless steel as well as warm colour tones champagne, gold and bronze. Decorative films also enhance the state-of-the-art range of designs.

Areas of application

PROCOVERclip Universal features long-term durability and the ability to absorb movements in the covering reliably. Whether it is a transition, compensator or ending profile: Coverings have enough working and breathing room based on the material and requirements.

- **Reliable absorption of floor covering movements**
- **Fast and easy installation**
- **High-quality variety of decors**
- **Primarily intended for parquet and laminate**

Installation in no time at all

PROCOVERclip Universal allows perfect transitions, adaptations and terminations to be installed quickly:

1 Cut the base and cover profiles to the required length on the same side. Screw or bond the base profile to the floor. If you have under-floor heating, use a suitable adhesive.

2 Lay the floor covering on the joint – depending on the shrinkage and expansion properties of the floor type.

3 Now insert the U-shaped height adapter profile into the base profile.

4 Then pull the cover profile over it.

5 If necessary, a little help can be provided with some careful hammer strikes on a tapping block. If the profile is installed professionally, we award a ten year guarantee on functionality.

Step profile system

PROSTEP Universal and PROSTEP

For stairs, getting trampled on day in and day out is par for the course. With their enormous durability, that is why our PROSTEP stair profiles are so impressive. They prolong the service life of the stair structure and also increase safety significantly. The low weight of aluminium is combined with considerable creative freedom, providing you with a range of different anodised colours.

Benefit from the whole!

Looking for stair edge profiles, stair finish profiles or angle profiles for finishing stair edges? Our PROSTEP product line (see page 25) offers you a range that leaves nothing to be desired. This applies not just in technical terms but to the design and decorative finish as well.

On the safe side with renovations

Safety is a critical criterion, particularly in the stair area. For this very reason, we have equipped the surfaces of our PROSTEP step profiles with parts that provide a better hold. These decrease the risk of slipping and tripping significantly. In new buildings and, above all, renovation projects, this is a significant plus that helps to restore stairs to their former glory.

- **Greater non-slip safety**
- **Ideal for refurbishing stairs**
- **Additional stability**
- **Broad spectrum of use as slide-in and cover profile for tread and riser**

Screw-down step profile systems

Lengths:

PROSTEP: 100 cm and 270 cm

PROSTEP Universal: 100 cm and 300 cm

Height adjustment:

PROSTEP: 7–24 mm

PROSTEP Universal: 6.5–15 mm;

with height adjustment elements: Up to 18 mm

Accessories: Height adjustment elements for height adjustment up to 18 mm

Functions and adjustment ranges: Page 20

Areas of application

With PROSTEP Universal (for laminate and parquet) and PROSTEP (for laminate, parquet and wooden planks), you can achieve maximal reinforcement of the stair design.

PROSTEP
Universal

PROSTEP

Tip

Visible cut edges with exposed stair flanks can be blended in perfectly with our PROSTEP angle profiles.

Installation a cinch

PROSTEP Universal and PROSTEP allows you to achieve greater safety and aesthetics for stairs quickly and easily.

1 Measure the length of the step to be covered and cut the base and cover profiles to size. **Tip:** The cover profile can be cut from both sides depending on the application. In this way, a uniform hole pattern is achieved in the cover profile.

2 Now place the base profile on the step and ensure that it is in full contact.

3 Position the base profile on the step and measure the tread and riser to be covered. Transfer the measurements to your covering and cut the tread and riser to size using a circular saw or jigsaw.

4 After checking the accuracy of your cuts you can start bonding or screwing the base profile and the stair coverings.

5 Insert the cover profile with the tab into the groove of the base profile and screw it down using the colour-coded countersink screws provided.

Uniquely adaptable

Quick and easy exchange of cover profiles

All profiles from Proline are characterised by lasting durability. Some customers, however, choose to change the trim or alter the anodised colour at a later date. We have provided a solution for this. All cover profiles available from a common system can be exchanged quickly and easily.

The focus on the customer

When we develop innovative products at Proline, we start by combining modern high quality materials with reliable and well conceived technology. The focus of this process is always on the interests of the customers and users. For example, we consider how to meet special requests from customers quickly even during the development phase. And consideration is likewise given to what might be needed to adapt cover profiles to new colours or furniture in the home.

A strong team: Cover and base profiles

The mechanical bond between base and cover profiles offers many advantages:

- **Base profiles can be fixed securely and effectively to the substrate before the floor covering is installed.**
- **Maximum height adjustment and great flexibility are achieved for bridging joints.**
- **Cover profiles can be matched perfectly to the conditions on site. They absorb movements in the floor covering without stressing the profile mechanism or the screw connections.**
- **Depending on the cover profile angle, the expansion joint on the left and right of the base profile remains unaffected.**

Maximum flexibility

The fact that our floor profiles have a degree of flexibility yet still remain sturdy, are capable of allowing movement in the floor covering yet facilitate quick and easy exchange of the cover profiles makes us proud – and it is also thanks to our patented swivel joint technology that we are able to master these challenges. This was the brief that we gave to our development department. But as the saying goes, necessity is the mother of invention. And the results are very convincing.

A cinch to switch

- **Run a chisel under the cover profile, starting from the end of the rail, and carefully lever it off the base profile over a wooden batten. Repeat this process every 10 cm until the profile is raised completely.**
- **Check the plastic joint to ensure that it still works properly. If it has to be replaced, use a sharp carpet knife to cut it into two and pull the two halves out of the base profile.**
- **Now, starting from the end of the rail, insert the new joint into the base profile from above at an angle.**
- **Finally, fit the new cover profile. The floor immediately looks brand new and your customers will be doubly satisfied.**

Floor profiles

PROCOVERfix Universal

Particularly during restoration and when renovating old buildings, old and new floor covering often meet. For cases such as these, we developed **PROCOVERfix Universal**. This floor profile can be fitted, even retroactively, as a transition and adaptation profile with ease and accuracy. With appealing anodised colours and decorative wood-effect film, it offers an aesthetically complete solution.

Stops edges from coming too short

As a supplement to PROCOVERfix Universal floor profiles, we recommend PROFACE for retroactive installation. These self-adhesive end finish profiles come with decorative trim that goes hand-in-hand with PROCOVERfix Universal. By using aluminium a level of quality is offered, not just in technical but also visual terms that will satisfy customers for many years to come.

Speedy installation

PROCOVERfix Universal is simply fitted to the punch dowels provided and then anchored together in the floor. The entire procedure is very fast but still offers you lasting durability. In addition, PROCOVERfix Universal is height adjustable in a range from 0 to 17 millimetres. With PROCOVERfix Universal, small transitions between different coverings can be bridged at any time.

- **Quick, easy installation**
- **Ideal for retroactive installation**
- **Particularly practical for refurbishments**

Press-in floor profiles

Lengths: 90 and 270 cm

Height adjustment: 0–17 mm

Functions and adjustment ranges: Page 25

Areas of application

PROCOVERfix Universal was especially designed for retro-installation – in old buildings, refurbishments or if the installation of transition and adaptation profiles was overlooked during the planning stage.

Transition Compensation

Eye-catching qualities

With a range of appealing anodised colours and decorative wooden film coatings, PROCOVERfix Universal is an attractive fully-fledged solution for retroactive installation.

Anodised colours and finishes

Anodised aluminium

Champagne

Stainless steel

Gold

Laminated with decorative film

Maple

Oak

Beech

Quick fix

With PROCOVERfix Universal, retroinstallation of profiles is a piece of cake.

1 Cut the profile to the right length.

2 To ensure that the structure is sturdy, the first dowel holes should be positioned as close to the side edges as possible (e.g. wall or door). Starting from this point, drill further dowel holes at gaps of 15–18 cm.

3 Place the cover profile on the floor upside down. Insert the required number of dowels in the guide rail of the cover profile and line them up with the drill holes in the floor.

4 Turn the profile over and carefully push the dowels into the drill holes.

5 When the profile is in position, carefully tap it into the floor. Use a wooden hammer to ensure that the surface is not damaged.

Floor profiles

PROSTEP, PROFACE, PROTRANS, PRONIVO K3, PROFINISH

With our floor profile systems, we offer you enhanced quality at a fair price. As a matter of course, the highest production quality, selected and sturdy materials as well as lasting attractive decorative trim are important factors for these profiles too. These profiles reveal their true strength in everyday applications and for price-conscious customers who still require dependable quality.

**Suitable
for all
floor covering
thicknesses**

The self-adhesive PROFACE ending profile, e.g. coated in brilliant white, is perfectly suited for balcony or patio doors

Areas of application

Whether for a stair nose, stepover to a patio, as a transition for different floor covering or to finish a covering along a wall: Proline step profiles, edge profiles, transition profiles and compensator profiles master all transitions, and bring old and new coverings together harmoniously and seamlessly.

Quality that looks pretty good

Proline floor profiles guarantee a high-quality termination for all parquet, laminate, carpet, tile and state-of-the-art decorative coverings. In addition, they secure the floor covering and fix them in place, increasing the durability and visual quality of floors for many years. An added advantage are the screws from the PROSCREW product line which are perfectly designed for use with these profiles.

- **Fitted quickly, easily and securely**
- **Wide range and variety of decorative trim**
- **Can be screw-fitted or bonded or push-fitted in hard floor covering**

Top-notch quality

Proline floor and step profiles

Step profiles

Product		Application	Function	Height	Ideal for
PROSTEP Treppenkantenprofil		Step and riser insert	Screw-down, top grooved	8– 9 mm 13–15 mm	Hard floor covering
PROSTEP Treppenkantenprofil		Step and riser holder	For gluing	3 mm 6 mm	Textile floor covering and Vinyl
PROSTEP Treppenkantenprofil		Tread insert	Screw-down, top grooved	5 mm	Hard floor covering, textile floor covering and Vinyl

PROFACE		Edge profile	Compressive function	3 mm	Textile floor covering and Vinyl
PROFACE		Edge profile	Standard profile, grooved	5 mm	Textile floor covering and Vinyl
PROFACE		Edge profile	Standard profile with countersunk holes or self-adhesive	9 mm	Textile floor covering and Vinyl
PROTRANS		Transition profile	Standardprofil, gelocht		Hard and textile floor covering and Vinyl
PROTRANS		Transition profile	Standard profile punched		Hard and textile floor covering and Vinyl
PROTRANS		Transition profile	Standard profile with two grooves, punched and self-adhesive		Textile floor covering and Vinyl
PROTRANS		Transition profile	Standard profile with two grooves, punched and self-adhesive		Textile floor covering and Vinyl
PROTRANS		Transition profile	Standard profile, top grooved, with compressive function	8 mm	Textile floor covering and Vinyl
PRONIVO K3		Transition and compensator profile	Standard profile	3 mm	Design covering
PROFINISH		Compensator profile	Standard profile with two grooves, punched	3 mm	Textile floor covering and Vinyl
PROFINISH		Compensator profile	Standard profile with two grooves, punched or self-adhesive	5 mm	Textile floor covering and Vinyl
PROFINISH		Compensator profile	Standard profile with two grooves, punched or self-adhesive	8 mm	Laminate
PROFINISH		Compensator profile	Standard profile with two grooves, punched or self-adhesive	14 mm	Hard floor covering
PROSCREW		für 270 cm Profillänge	/ Bags with 15 coloured screws each and 5 mm dowels	3,0 x 25 mm	

* PROFACE T is also available as an edge frame for textile floor covering and vinyl in a size of 60 x 60 cm, ideal for inspection holes of system floors.

How to cut perfectly

Adjusting Proline floor profiles

Aluminium, stainless steel, brass, decorative film, veneers and anodised finishes etc. No matter what the finish or material of our profiles, they can always be cut in such a way that the surface finishes are not damaged. This ensures aesthetic quality and lasting durability.

The correct side

On many of our floor profiles, a cover profile is screwed to the base profile. When cutting these profiles, ensure that the cover profile and the base profile are shortened to the correct length from the same side. In this way, the screws fit precisely and engage securely in the four-sided screw cavity of the base profile.

The right tools

Practically all of our floor profiles can be cut using commercially available cutting discs. For stainless steel profiles, it is best to use stainless steel cutting discs (1 mm thick) designed specifically for this purpose. We recommend aluminium-diamond cutting discs (1 mm thick) for our aluminium profiles to achieve a perfect cut every time.

Resistance makes sense

The anodised layer of Proline floor profiles is characterised by extra thickness and a high resistance to abrasion. We achieve this by selecting high quality materials and employing a precise manufacturing process. "German Quality" by Proline is also evident in the way profiles from Proline are cut: with surface finishes that survive the test of time even after cutting.

Tip

What you need to cut floor profiles from Proline:

- Angle or power cutter
- Cutting disc for stainless steel or aluminium (1 mm thick)
- Vice or similar clamping tool
- Mitring tool/protractor
- Protective eyewear, hearing protectors and gloves
- If a cross-cut saw is available on site, this can of course also be used to cut profiles from Proline. Important: Use a metallic saw blade!

Because quality also counts when it comes to accessories

Proline offers high quality extras

To ensure that the installation of our floor profile systems runs smoothly, we offer a whole range of additional products. These products are just as impressive as our profiles when it comes to quality and design. And even if you have to conceal a minor imperfection or two, with our accessory products we give you the right tools to get the job done.

Elegant buffers and radiator trim

We know from practical experience that it is not always easy to find a doorstop or a radiator pipe cover that goes with the floor. That is why we supply you with these practical accessories as well. They come in different designs to match our floor profiles and different types of wood and decorative trim.

If something still goes awry

It is not always possible to rule out mistakes completely. Minor scratches and dents that occur during installation can be covered up using Proline soft and hard waxes that are matched to the colour of the floor covering. We also offer a melter to go with our hard wax. It is known to have worked minor miracles on building sites.

Installing with care

The surface finishes of our floor profiles are incredibly resistant. Nevertheless, no-one wants to run the risk of scratching or damaging new materials when they are fitted. To cater for this, we offer you our tapping blocks made of beech or plastic. These are practical aids during installation that provide protection and functionality.

The standard we set ourselves

Quality “Made in Germany”

When you choose Proline, you’re choosing a genuine premium provider that stands behind its products. This not only applies to our floor profile systems and floor profiles, but also to the entire Proline product portfolio.

First class materials and excellent workmanship

We know how important the choice of materials and production processes are for the quality of our products. This is why we manufacture most of our products in Germany. We use machines that work according to processes that have been thoroughly tested to ensure that they meet our high standards. These factors are what make us able to manufacture reliable and durable products.

Extras – no problem with Proline

Our entire product portfolio is the result of research and development, many years of experience and our endeavours to meet customer requirements. The product range is so wide that it can cover the needs of almost any project. But sometimes there is just no way around a tailor-made solution. Even then, Proline is still the competent partner for you. Our claim is that we can always offer you the best solution in all situations – whether it is a major project or a custom design.

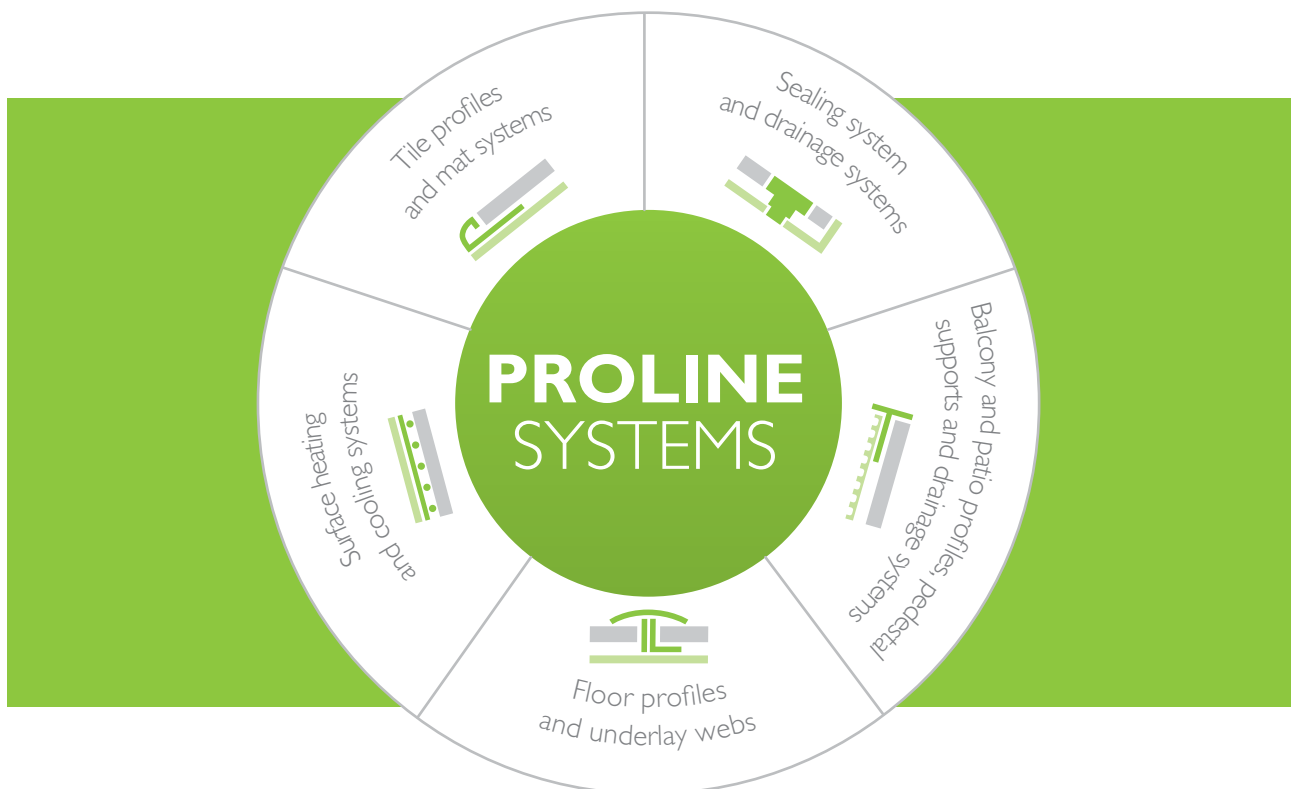

Our quality assurances

- **We manufacture using the latest state-of-the-art technology.**
- **We conduct quality controls during production and on the finished product.**
- **We optimise our products by performing material and stress tests during the development phase.**
- **Our production machines meet the latest technical requirements.**
- **Our products are tailored to the needs of our customers. For large projects we also produce special production series and custom solutions.**

Product systems from Proline

Because the whole is more than the sum of its parts

Time is money. If you procure each of the components for the floor, wall, wet room and outdoor floor covering separately, your ultimate concern will be whether one or other of the links along the chain may turn out to be the weak point. And this may affect your competitiveness. That is why Proline makes your choice easier: Whatever you need on the building site – we have got it. And what we have is compatible down to the minutest detail.

An unbeatable team

Every product from Proline is part of a chain and you can rely on every link in that chain. Each of our products is exceptional on its own. But when used together, they truly exceed the sum of their parts. Floor profiles work perfectly with underlay materials; tile profiles join seamlessly with the functionality of matting systems. Proline can be used for anything, even drainage and sealing systems. You can even get all system components with the same decor versions and materials – for visual as well as technical harmony.

Satisfied customers – for many years!

Proline offers you an enormous choice of design solutions in all product lines. This way, you can cater to all customer demands individually. Another advantage for trade, craftspeople, planners and clients: Proline products offer durability and save time – thanks to matching system components and the high quality of every single product. In turn, this makes for enthusiastic customers since floor and wall coverings combined with Proline products enjoy a much longer service life.

Informational materials

Even professionals need help and advice now and then. By choosing Proline, you've come to the right place. An initial overview is provided by our product data sheets that you can order by phone or download from the internet. Laying instructions round off the service.

Technical Hotline

Our engineers have extensive product know-how to assist you. For major projects, for example, we offer consultation on site. But even on the Proline Engineering Hotline you will always reach the right contact person to discuss technical queries in detail – just to be on the safe side.
